Simulation software used to produce results in cond-mat/0009448 – published as Helbing et.al, Simulating Dynamical Features of Escape Panic, *Nature* 407, 487-490 (2000) – has been made available via the website of the publication at <http://angel.elte.hu/panic>.

I. BRIEF DESCRIPTION

The source code [1] is in plain text format, and the files have been successfully compiled and run on various Linux systems. Documentation is available starting from the file `00_README.txt`.

The program has three different output formats.

- The primary output format is through images on the monitor (using the so-called X server).
- The secondary output format is Encapsulated Postscript images.
- Another possible output format is a compact data file containing all coordinates of all particles during the simulation.

Acknowledgements

The authors thank their host institutions for support, and Z. Csahók and Z. Farkas for permission to include the two library files they had previously developed.
